BLS 8-10:30AM

ACLS 8AM-2PM

PALS 8AM-5PM

Basic Rhythm Interpretation
8-10AM

Simulation 8-10AM
SMC staff only

NRP 8AM-10AM

TNCC 8AM *(both days)*

BLS

Basic Life Support (BLS) is a nationally recognized program designed by the American Heart Association (AHA) to build the foundation for saving lives after cardiac arrest. The skills you learn in this course will enable you to recognize cardiac arrest, provide cardiopulmonary resuscitation (CPR), use an automated external defibrillator (AED), and relieve choking in a quick and confident manner.

Intended audience: certified or non-certified, licensed or non-licensed healthcare professionals such as physicians, nurses, paramedics, emergency medical technicians, respiratory therapists, physical or occupational therapists, nursing students, fire fighters, police officers, or other allied health professionals.

ACLS

Advanced Cardiovascular Life Support (ACLS) is a nationally recognized program designed by the AHA for healthcare providers who participate in the management of cardiopulmonary arrest or other cardiovascular emergencies. Through didactic instruction and active participation in simulated cases, students will enhance their skills in the recognition and intervention of cardiopulmonary arrest, post-cardiac arrest care, acute arrhythmias, stroke, and acute coronary syndromes.

PALS

Pediatric Advanced Life Support (PALS) is a nationally recognized program designed by the AHA for healthcare providers who participate in the management of respiratory and/or cardiovascular emergencies and cardiopulmonary arrest in the pediatric patient. Pre-course preparation, didactic instruction, and active participation in skill stations and simulated cases will be used to enhance the recognition of and intervention for respiratory emergencies, shock, and cardiopulmonary arrest.

NRP

Neonatal Resuscitation Program (NRP) course conveys an evidence-based approach to care of the newborn at birth and facilitates effective team-based care for healthcare professionals who care for newborns at the time of delivery. NRP utilizes a blended learning approach, which includes online testing, online case-based simulations, and hands-on case-based simulation/debriefing that focus on critical leadership, communications, and team-work skills.

TNCC

Trauma Nursing Core Course (TNCC) is widely recognized as the premier course for hospitals and trauma centers worldwide, empowering nurses with the knowledge, critical thinking skills, and hands-on training to provide expert care for trauma patients. Learn rapid identification of life-threatening injuries, comprehensive patient assessments, and enhanced interventions for better patient outcomes. A variety of learning methodologies are incorporated into TNCC, including online, a textbook, interactive lecture, hands-on practice and case-based learning.

BASIC RHYTHM INTERPRETATION

Basic Rhythm Interpretation is intended for nurses and paramedics who care for patients on telemetry. The course reviews basic anatomy and physiology of the heart and cardiac conduction system. Instruction and guided practice for effectively interpreting cardiac rhythm strips is the core objective of the course

SIMULATION

Simulation is various simulation scenarios for nurses and paramedics offered on a rotating basis throughout the year. **This is open to SMC staff only.**

Do you need individualized or customized group training?

We accept requests for classes in BLS, ACLS, PALS, NRP, TNCC, Heartsaver® CPR and AED, and Heartsaver® First Aid.
